universa_hsg Corina (4. Semester Economics)

{“As some might believe, data science is no magic - it is just a bunch of numbers on which data science tools and skills are applied.” 😊} Corina says that the DSF Program has broadened her mind and implemented a new way of thinking. In her opinion everyone should apply for the DSF Program as interdisciplinary work becomes ever more important in our specialised world and it is a great opportunity to learn actual hands on technical skills.

universa_hsg Caroline (4. Semester Economics) {"Open up the blackbox of tech!"} Caroline is very impressed by the DSF (Data Science Fundamentals) Program where you have the possibility to get in touch with coding and data science.

She underlines the fact that the atmosphere among the participants is very helpful and familiar. Beside that she mentions that the learning curve is very steep.

If you are interested you will find more information about the DSF on the homepage of the University of St. Gallen.

universa_hsg Céline (21, Economics)
{„Data science is everywhere, open your horizon and get out of your comfort zone!“} Céline summed up that thanks to the Data Science Program (DSF) she discovered the power of data science. Beside that she would like to mention that you should not be afraid of the amount of work because the course structure helps you to handle it.
